Week 7 2026 — Combined Board, Stats Only

Scope: stats, game flow, turnovers, sacks, pressure, prior-game box score and EPA. Scrubbed: home/road, day of week, division, rest, travel, bye, lookahead, line movement, line bands, cover/miss streaks. Backtest 2015–2025, nflverse play-by-play; band games 4–7 for composite cells, weeks 4–9 for favorite screen, totals sweep and the re-tested trend traits. Lines: nflverse games.csv, Oct 20 2026. SF @ ATL has no line yet and is not scored. WAS and SF season stats run through week 5 (Monday night game not yet in the feed).. Role (favorite or dog this week) is the only conditioning.

Score = strength + 2 × breadth. Strength = sum of percentage-point edge over 50 for supporting cells minus opposing cells. Breadth = supporting cells minus opposing cells. Four cell families feed every game: dog composite and favorite screen (season-to-date stats), prior-game flow (ugly/pretty win markers, surges, garbage time), and the PDF trend traits that survive role-only re-testing.
