# Week 8 2026 — Board, Mid-Season Engine (games 8–13)

The early-season composite (games 4–7) is out of its validated window; its ≥ +7 band runs 53% from game 8 on. This board uses cells re-tested on games 8–13, 2015–2025. Stats, game flow, turnovers and pressure only; no scheduling inputs. Lines: nflverse games.csv, Oct 29.

**Totals** use the mid-season totals composite: pair cells each 7–10 of 11 seasons, both halves agree. Net ≥ +2 → over 61.4%; net ≤ –3 → under 61.2%; net –2 → under 56.6%. **Sides** have no validated mid-season composite (the fitted one fails out of sample), so a side is a count of individual cells that hold on games 8–13 at 7+ of 11 seasons, net = for minus against. Treat side tiers as lower conviction than the totals.
